

Some rules to follow during running the project:

make the restaurant owner functionalities first in order to use the customer functionalities more easy:

REASTURANT OWNER:

- 1)sign up
 - 2)sign in
 - 3)add restaurant (put the restaurant name and menu In the Jason body)will be found ready in the postman collection we provide
 - 4)edit meal (send the id of the restaurant in the URL and the id of the restaurant in the body we send the edited things)
 - 5)add meal (send the id of the restaurant in the URL ,in the body we send the added meals)
 - 6)delete meal (send the id of the restaurant and the id of the the meal we want to delete)
 - 7)print the restaurant report (send the id of the restaurant),the user must make any order first in order for the report to be print
 - 8)**in the two methods(get restaurant by id,get restaurant report)if the restaurant owner is not the last one who sign so nothing will appear because this other one doesn't have permission**
-

-after making the functionalities of restaurant owner please fill in first the info of runner to be able to make order in customer

RUNNER ROLES:

- 1)sign up
- 2)sign in
- 3)to use (**mark your orders and get the number of trips**) customer must make order first.

-now you can test the customer functionality:

1)sign up

2)sign in

3)make order send in the URL the restaurant id and sent in Jason the id of the meal

4)the customer can check the available restaurant and there menus using (show all restaurants)

5)the customer can see there orders using (get order by id)

6)customer can edit,delete,update his order

Note: you can't switch between functionalities of different users unless you make sign in first for this role
